

NEW

Dear Customer,

We are delighted to introduce you to the all-new via GO, a small, powerful and easy-to-use drive for manual wheelchairs. This pushing aid for third parties combines both alber technology and simplicity with its easy-to-install universal mounting.

The via GO has been specially developed to enable users accompanied by a third party to move easily over long distances and over steep inclines of up to 16%. The walk will be a pleasant experience for both the carer and the manual wheelchair user.

Thanks to its cutting-edge lithium-ion technology, the via GO weighs just 6kg, so you can carry it around easily and charge it in the car to take it with you wherever you go.
